

## Insights and Visualization.

From the resulting clean dataset (twitter archive master.csv). I was able to uncover the following insights. The most popular dog stage were pupper with 212 followed by doggo with 74, puppo with 23 and lastly floofers with 9. The most popular dog name was Cooper with 3 instances the name. A large portion of the users did not provide us with a name (around 98 unnamed dogs). The highest rated dog was Sophie, a pupper of breed clumber. The most popular dog breed were the golden retrievers. The median rating for the dogs was 11.5.

For the visualization, I plotted a bar graph of the value counts of the dog stages. From the bar graph, it is clear that it is skewed to the right. The tail is dog stage floofer with the head being dog stage pupper.
